INSTALLATION

The valve is provided with M20 conduit thread electrical entry to accept screw in compression type cable gland or conduit stopping gland with or without adapter, chosen in accordance with a recognised Code of Practice for the conditions of use. Sealing of the gland thread is not a requirement of the approval but thread sealant or sealing washers may be used to maintain the IP rating of the enclosure.

SPECIAL CERTIFICATION CONDITIONS

1. The valve assembly must be complete when the coil is energised.
2. The supply voltage must not exceed 1.1X rated voltage for AC units, 1.2X rated voltage for DC units.
3. The coil supply circuit must be individually protected by a fuse which has a standard rated current nearest to that of the normal operating current of the solenoid and of the type specified in Standard Sheet III of IEC Publication 127 for up to 250 V. (See FUSE RATING shown overleaf)
4. The temperature of the medium passing through the valve must not exceed 40°C.
5. Any internal earth conductor must be connected by means of a crimped ring type connector.
